

RE: OPEN ACCESS

I am completely opposed to Open Access.

As a taxpayer and American citizen, I want the sell of any American property to result in the maximum proceeds, regardless of what some third party may think is fair. This means no artificial constraints on how the spectrum used by the winner (the service condition of open access) or any other limits on who may bid.

The government should not dilute the value of this spectrum; because it is not fair to the little guy or the government wants to provide an indirect taxpayer subsidy to encourage wireless expansion.

The government should allow the free market to work unencumbered.
